## Dear Property Owner,

The lining process was chosen to restore the structural integrity of the public sewer pipe under the street because it is less disruptive and does not involve digging. The lining of the sewer could take the whole day depending on diameter of the pipe being lined. However, because of the large operation, the use of heavy and often noisy equipment along with the disconnection of your private sewer service for a maximum of one (1) day is inevitable.

Any water use during this period should be extremely limited. Please do not wash clothes, dishes, or use your shower. The wastewater in your private sewer service will not be able to drain and excessive use will create a back up into your basement.

The installation of the sewer liner and the materials can cause some odors to enter your home. In order to minimize entrance of these odors into your home, please pour some water in your floor drains to be sure that your plumbing traps are not dry.

In most cases, traffic will be limited to one lane in the construction zone. "No Parking" signs and detours will be posted prior to any traffic changes. It is important that you do not park in the posted areas and also follow any traffic detours.

After the public sewer pipe under the street is lined, it will have the strength and endurance of a new pipe. Open trench replacement of such a large pipe would require several months and cause great inconvenience to the neighborhood. Please be patient with the construction and follow any advice offered by the Contractor. **There will be no assessment to property owners for this work**.
